

AMENDMENTS TO THE CLAIMS

Claims 1-31 are pending in the instant application. Claims 1-31 have been amended. Claims 1, 11, and 21 are independent. Claims 2-10, 12-20, and 22-31 depend from independent claims 1, 11, and 21, respectively.

The Applicant requests reconsideration of the claims in view of the following amendments reflected in the listing of claims.

Listing of claims:

1. (Currently Amended) A method for communicating information in a distributed network, the method comprising:

detecting ~~availability of at least whether one or more~~ of new media, data and/or service becomes newly available within the distributed network;

migrating said newly available ~~at least one one or more~~ of new media, data and/or service to at least a first media processing system within the distributed media network;
and

storing said migrated newly available ~~at least one one or more~~ of new media, data and/or service at said at least a first media processing system.

2. (Currently Amended) The method according to claim 1, further comprising determining whether said stored migrated newly available ~~at least one~~one or more of new media, data and/or service should be processed.

3. (Currently Amended) The method according to claim 2, further comprising if said stored migrated newly available ~~at least one~~one or more of new media, data and/or service is to be processed, migrating said stored migrated newly available ~~at least one~~one or more of new media, data and/or service into ~~at least one~~ or both of a media view and/or a channel view.

4. (Currently Amended) The method according to claim 3, wherein said ~~at least one~~ or both of a media view and/or a channel view is associated with said first media processing system.

5. (Currently Amended) The method according to claim 3, further comprising determining whether to push said migrated newly available ~~at least one~~one or more of new media, data and/or service to ~~at least one~~ or both of a second media processing system and/or a personal computer coupled to the media exchange network.

6. (Currently Amended) The method according to claim 5, further comprising if said migrated newly available ~~at least one~~one or more of new media, data and/or

service is to be pushed, migrating said ~~at least one~~ of newly available one or more of new media, data and/or service to said ~~at least one~~ or both of said second media processing system and/or a personal computer coupled to the media exchange network.

7. (Currently Amended) The method according to claim 1, ~~further~~ comprising automatically migrating said newly available ~~at least one~~ one or more of new media, data and/or service to at least a first media processing system within the distributed media network.

8. (Currently Amended) The method according to claim 1, ~~further~~ comprising scheduling said migration of said newly available ~~at least one~~ one or more of new media, data and/or service to ~~at least one~~ or both of said first media processing system and/or a second media processing system within the distributed media network.

9. (Currently Amended) The method according to claim 8, ~~further~~ comprising indicating said migration of said newly available ~~at least one~~ one or more of new media, data and/or service to ~~at least one~~ or both of said first media processing system and/or a second media processing system within the distributed media network.

10. (Currently Amended) The method according to claim 1, ~~further~~ comprising archiving said stored newly available ~~at least one~~one or more of new media, data and/or service.

11. (Currently Amended) A machine-readable storage having stored thereon, a computer program having at least one code section for communicating information in a distributed media network, the at least one code section being executable by a machine for causing the machine to perform steps comprising:

detecting ~~availability of at least whether~~ one or more of new media, data and/or service becomes newly available within the distributed network;

migrating said newly available ~~at least one~~one or more of new media, data and/or service to at least a first media processing system within the distributed media network; and

storing said migrated newly available ~~at least one~~one or more of new media, data and/or service at said at least a first media processing system.

12. (Currently Amended) The machine-readable storage according to claim 11, ~~further~~ comprising code for determining whether said stored migrated newly available ~~at least one~~one or more of new media, data and/or service should be processed.

13. (Currently Amended) The machine-readable storage according to claim 12, further comprising code for migrating said stored migrated newly available ~~at least oneone or more~~ of new media, data and/or service into ~~at least one~~ or both of a media view and/or a channel view, if said stored migrated newly available ~~at least oneone or more~~ of new media, data and/or service is to be processed[.].

14. (Currently Amended) The machine-readable storage according to claim 13, wherein said ~~at least one~~ or both of a media view and/or a channel view is associated with said first media processing system.

15. (Currently Amended) The machine-readable storage according to claim 13, further comprising code for determining whether to push said migrated newly available ~~at least oneone or more~~ of new media, data and/or service to ~~at least one~~ or both of a second media processing system and/or a personal computer coupled to the media exchange network.

16. (Currently Amended) The machine-readable storage according to claim 15, further comprising code for migrating said ~~at least one of~~ newly available one or more of new media, data and/or service to said ~~at least one~~ or both of said second media processing system and/or a personal computer coupled to the media exchange

network, if said migrated newly available ~~at least one~~one or more of new media, data and/or service is to be pushed.

17. (Currently Amended) The machine-readable storage according to claim 11, ~~further~~ comprising code for automatically migrating said newly available ~~at least one~~one or more of new media, data and/or service to at least a first media processing system within the distributed media network.

18. (Currently Amended) The machine-readable storage according to claim 11, ~~further~~ comprising code for scheduling said migration of said newly available ~~at least one~~one or more of new media, data and/or service to ~~at least one~~ or both of said first media processing system and/or a second media processing system within the distributed media network.

19. (Currently Amended) The machine-readable storage according to claim 18, ~~further~~ comprising code for indicating said migration of said newly available ~~at least one~~one or more of new media, data and/or service to ~~at least one~~ or both of said first media processing system and/or a second media processing system within the distributed media network.

20. (Currently Amended) The machine-readable storage according to claim 19, further comprising code for archiving said stored newly available ~~at least one~~one or more of new media, data and/or service.

21. (Currently Amended) A system for communicating information in a distributed media network, the system comprising:

at least one processor for detecting ~~availability of at least whether one or more~~ of new media, data and/or service becomes newly available within the distributed network;

said at least one processor for migrating said newly available ~~at least one~~one or more of new media, data and/or service to at least a first media processing system within the distributed media network; and

a local storage for storing said migrated newly available ~~at least one~~one or more of new media, data and/or service at said at least a first media processing system.

22. (Currently Amended) The system according to claim 21, wherein said at least one processor determines whether said stored migrated newly available ~~at least one~~one or more of new media, data and/or service should be processed.

23. (Currently Amended) The system according to claim 22, wherein said at least one processor migrates said stored migrated newly available ~~at least one~~one or more of new media, data and/or service into ~~at least one~~ or both of a media view and/or a

channel view, if said stored migrated newly available ~~at least one~~one or more of new media, data and/or service is to be processed.

24. (Currently Amended) The system according to claim 23, wherein said ~~at least one~~ or both of a media view and or a channel view is associated with said first media processing system.

25. (Currently Amended) The system according to claim 23, wherein said at least one processor determines whether to push said migrated newly available ~~at least one~~one or more of new media, data and or service to ~~at least one~~ or both of a second media processing system and or a personal computer coupled to the media exchange network.

26. (Currently Amended) The system according to claim 25, wherein said at least one processor migrates said ~~at least one of~~ newly available one or more of new media, data and or service to said ~~at least one~~ one or both of said second media processing system and or a personal computer coupled to the media exchange network, if said migrated newly available ~~at least one~~one or more of new media, data and or service is to be pushed.

27. (Currently Amended) The system according to claim 21, wherein said at least one processor automatically migrates said newly available ~~at least one~~one or more of new media, data and/or service to at least a first media processing system within the distributed media network.

28. (Currently Amended) The system according to claim 21, wherein said at least one processor schedules said migration of said newly available ~~at least one~~one or more of new media, data and/or service to ~~at least one~~ or both of said first media processing system and/or a second media processing system within the distributed media network.

29. (Currently Amended) The system according to claim 28, wherein said at least one processor indicates said migration of said newly available ~~at least one~~one or more of new media, data and/or service to ~~at least one~~ or both of said first media processing system and/or a second media processing system within the distributed media network.

30. (Currently Amended) The system according to claim 11, ~~further~~ comprising an archival storage for storing said stored newly available ~~at least one~~one or more of new media, data and/or service.

31. (Currently Amended) The system according to claim 21, wherein said at least one processor is ~~at least one~~ or more of a computer processor, media peripheral
